SUMMARY

Results-driven Computer Science student and Full Stack Developer with a 3.51 CGPA and hands-on experience in building responsive web applications using MERN stack technologies. Proficient in C++, Python, JavaScript, HTML/CSS, and backend development with MongoDB. Passionate about developing scalable applications, solving real-world problems, and continuously learning modern web technologies.

EDUCATION

BS Computer Science

2023 – 2027 (Present)

Virtual University of Pakistan

Intermediate in Computer Science (I.C.S)

2021 – 2023

Army Public School and College System

SKILLS

HTML | CSS | JavaScript | Python | C++ | MongoDB

PROJECTS

1) LevelUpCuties — MERN Stack, HTML/CSS, MongoDB Atlas, Railway

Description: Engineered a full-stack, mobile-responsive platform featuring secure user session management (account creation, tracking, and logout) alongside dynamic multimedia galleries for self-development, self-love, and motivation.

Technical Impact: Integrated a live habit tracker to save user activity data directly to MongoDB Atlas, curated external resource links and blogs, and deployed the production environment on Railway.

2) Dance Academy Website — Node.js, Express.js, MongoDB, Pug, CSS

Description: Developed a full-stack web application featuring dynamic multi-page navigation, custom CSS gallery animations, and seamless data persistence.

Technical Impact: Programmed server-side routing using Express.js and integrated a backend MongoDB database to capture, process, and securely store user inquiries from an interactive contact form.

3) Student Management System — Python

Description: Built a command-line application to automate academic record-keeping and student data administration using pure Python logic.

Technical Impact: Programmed essential CRUD functionalities allowing users to seamlessly add, search, and delete records via unique roll numbers; designed a clean, tabular data layout for quick navigation.

4) Calendar Generator — Python

Description: Developed a lightweight terminal utility that programmatically generates and formats complete yearly and monthly calendars.

Technical Impact: Leveraged Python's built-in calendar module to instantiate a TextCalendar object configured to start on Sunday; utilized precise spacing constraints to output clean grid structures.
